

IN THE CLAIMS

Please amend the claims as follows:

1 (Currently Amended). A mail-arrival notification system, comprising:

a mail-arrival monitoring apparatus ~~for judging~~ configured to judge based on a given mail-arrival notification condition information whether an electronic mail including an attached file arriving at a prescribed mail server is an urgent mail or not, and for, when said electronic mail is an urgent mail, ~~generating~~ to generate a summary of said urgent mail ~~including information from said attached file~~, and ~~for transmitting~~ to transmit said summary together with a mail-arrival notifying signal excluding said attached file to a mail destination designated by said mail-arrival notification condition information;

a mobile communication terminal ~~for notifying~~ configured to notify a user of arrival of said urgent mail, in response to said mail-arrival notifying signal transmitted from said mail-arrival monitoring apparatus, and ~~for transmitting a~~ to transmit an acquisition instructing signal to a remote information processing apparatus in order to instruct acquisition of said remote information processing apparatus to acquire said urgent mail and attached file; and

~~an said remote~~ information processing apparatus for acquiring configured to acquire said urgent mail including said attached file from said mail server, in response to said acquisition instructing signal transmitted from said mobile communication terminal.

2 (Currently Amended). The mail-arrival notification system according to claim 1, wherein said mobile communication terminal ~~transmits~~ is configured to transmit said acquisition instructing signal when a prescribed acquisition instructing operation is performed under receipt of said mail-arrival notifying signal.

3 (Currently Amended). The mail-arrival notification system according to claim 1, wherein[[:]] said mobile communication terminal ~~transmits~~ is configured to transmit said acquisition instructing signal by radio; and said information processing apparatus receives said acquisition instructing signal by radio.

4 (Currently Amended). The mail-arrival notification system according to claim 3, wherein said information processing apparatus ~~aequires~~ is configured to acquire said urgent mail via said mobile communication terminal.

5-14 (Canceled).

15 (Currently Amended). A mobile communication terminal, comprising:  
receiving means for receiving a mail-arrival notifying signal together with a summary of an electronic mail ~~including information from an attached file~~ to make a notice that said electronic mail arriving at a prescribed mail server is an urgent mail; and  
transmitting means for transmitting an acquisition instructing signal to a remote information processing apparatus to instruct acquisition ~~of said urgent mail including an attached file, to a prescribed information processing apparatus by radio communications for short distance, based on said mail-arrival notifying signal.~~

16 (Original). The mobile communication terminal according to claim 15, wherein said receiving means receives said mail-arrival notifying signal over a public radio circuit network.

17 (Original). The mobile communication terminal according to claim 15, wherein said receiving means receives said mail-arrival notifying signal from a prescribed mail-arrival monitoring apparatus which judges an electronic mail arriving said mail server, by radio communications for short distance.

18 (Original). The mobile communication terminal according to claim 15, further comprising notifying means for notifying a user of arrival of said urgent mail, in response to said mail-arrival notifying signal received.

19 (Original). The mobile communication terminal according to claim 15, wherein said transmitting means transmits said acquisition instructing signal including a Message-ID of an electronic mail that is judged as an urgent mail, included in said mail-arrival notifying signal.

20 (Original). The mobile communication terminal according to claim 15, wherein said transmitting means transmits said acquisition instructing signal to a prescribed information processing apparatus by radio communications for short distance, in response to an operation button which is operated by a user to instruct transmission of said acquisition instructing signal.

21 (Currently Amended). An information processing apparatus, comprising:  
receiving means for receiving an acquisition instructing signal transmitted from a remote prescribed mobile communication terminal, according to a mail-arrival notifying signal to make a notice that an electronic mail arriving a prescribed mail server is an urgent mail; and

mail acquiring means for acquiring said urgent mail including an attached file from said mail server in response to said acquisition instructing signal received from said mobile communication terminal.

22 (Original). The information processing apparatus according to claim 21, wherein said receiving means receives said acquisition instructing signal from said mobile communication terminal by radio communications for short distance.

23 (Original). The information processing apparatus according to claim 21, wherein said mail acquiring means acquires said urgent mail from said mail server based on the Message-ID of said electronic mail included in said acquisition instructing signal.

24 (Original). The information processing apparatus according to claim 21, wherein said mail acquiring means acquires said urgent mail from said mail server via a prescribed mobile communication terminal by radio communications for short distance.

25-29 (Canceled).
